

ABSTRACT

The present invention provides a carbostyryl compound represented by General Formula (1)

5

or a salt thereof, wherein A is a direct bond, a lower
alkylene group, or a lower alkylidene group; X is an oxygen
10 atom or a sulfur atom; R⁴ and R⁵ each represent a hydrogen
atom; the bond between the 3 and 4 positions of the
carbostyryl skeleton is a single bond or a double bond; R¹ is
a hydrogen atom, etc; R² is a hydrogen atom, etc; and R³ is a
hydrogen atom, etc. The carbostyryl compound or salt thereof
15 of the present invention induces the production of TFF, and
thus is usable for the treatment and/or prevention of
disorders such as alimentary tract diseases, oral diseases,
upper respiratory tract diseases, respiratory tract diseases,
eye diseases, cancers, and wounds.
